

Capital Improvement Program

This section provides detailed information on the Village's Capital Improvements Program. The program provides for building and infrastructure improvements, as well as the replacement of vehicles and equipment in excess of \$10,000.

A summary of the 2019 – 2023 Five Year Capital Improvement Program is contained in this section. Detailed information on those capital items included in the 2019 Budget and the impact those items have on the 2019 operating Budget are included.

Capital Improvement Program

The Five Year Capital Improvement Program (CIP) is a planning tool for the Village that seeks to identify major capital projects and a corresponding funding source for projects that are \$10,000 or more.

The Five Year Capital Improvement Program is prepared by staff and reviewed by the Administrator, Assistant Administrator and Finance Director. Departments are responsible for identifying capital projects which are then priorities based on need and availability of funding. The necessity of the capital acquisition or improvement is evaluated based on Village Board Goals, residents' concerns, current and future maintenance costs, revenue generation, ability to meet current levels of service, safety issues and legal requirements. Projects with currently available funding sources such as grant revenues may be prioritized. Following review the Capital Improvement Program is presented to the Village Board. The Program may be amended during the budget process as determinations are made for items to be moved forward or to be deferred based on current information.

Capital Improvement Categories

Capital Improvements included in the Fiscal Year 2019 Budget total \$4,162,988 from the following categories:

Buildings and Improvements

Village facilities include Village Hall which houses Administration, Finance, Building, Police, and Fire operations as well as the Public Works Garage which is located in a separate facility. Improvements at the Water Pumping Station are identified under the Water and Sewer CIP section.

3 Facilities

Capital Improvements by Category

Vehicles

51 vehicles in the fleet

The vehicle section includes the replacement or acquisition of Village vehicles and is subdivided into police, fire, and public works sections. The detail page of each vehicle to be replaced in 2019 provides a picture of the vehicle, historical cost and repair information, a description of how the vehicle is used, and its life expectancy.

Equipment

The Equipment section lists those capital equipment items that need to be replaced or acquired over the next five years. This section addresses equipment for the Fire, Police and Public Works operations.

Information Technology (IT)

The Village's third-party information technology consultant, ClientFirst, has prepared a strategic information technology business plan for the Village. The plan evaluated the Village's hardware and software capabilities to determine improvements that could be made to improve efficiencies, system security and capabilities. Recommendations from the plan are incorporated into the five-year CIP including an update to the Strategic Plan, network improvements, software upgrades, PC replacements, and IT security initiatives.

Streets, Sidewalks and Alleys

31.6 miles

This section includes improvements to alleys, sidewalks, curbs and streets. The annual Street Improvement Program is funded through the General, Motor Fuel Tax (MFT), Water and Sewer, Capital Improvement and Infrastructure Improvement Bond Funds.

Water and Sewer Improvements

76.5 miles of sewer and water mains

The Village annually budgets for the improvements and maintenance of the sewer system, including sewer lining, rehabilitation and repairs. The Village's water system serves a population of more than 11,000. Maintenance of

Capital Improvement Program

the pumping station and distribution system is essential to the water utility's operation. The Village's water rate includes funding for water main improvements. Water main replacement is indicated when a history of line failure or a lack of adequate fire flow exists. Whenever possible, water main replacement is scheduled to coincide with street improvements to limit the impact of construction activity to a particular area. Water Pumping Station equipment is also included in this section.

Capital Improvement Funding Sources

The Five Year Capital Improvement Program (CIP) is financed through the following Village funds or specific revenue sources. The individual project sheet will indicate if a project is intended to be financed with a specific revenue source, such a grant, within the fund. The proposed FY 2019 funding sources are described below:

General Fund

The General Fund is the major operating fund in the Village's Budget and provides for all activities not accounted for in other funds.

Motor Fuel Tax Fund (MFT)

The State of Illinois has imposed a gasoline tax on the privilege of operating motor vehicles on public highways in Illinois. MFT dollars are collected by the State and remitted to the municipality on a per capita basis.

Water and Sewer Fund

The Water and Sewer Fund generates revenue via the water and sewer rates and has also used bank and IEPA loans to fund its capital improvements.

Capital Equipment Replacement Fund

The Capital Equipment Replacement Fund (CERF) is a capital projects fund that accumulates transfers from the General and Water and Sewer Funds for the eventual replacement of equipment and vehicles. The Building & Development, Police, Fire and Public Works departments in the General Fund and the Water and Sewer Fund transfer monies to the CERF fund annually to cover future replacements. These annual transfers are intended to avoid significant fluctuations in the operating budgets from year to year. Water and Sewer Fund vehicles and equipment to be replaced are designated with a funding source of CERF/WS.

Capital Improvements Fund

The Capital Improvements Fund is used to account for improvements to buildings, parking lots, municipal lighting systems, alleys, streets and information technology. Revenue sources include red light camera revenue, parking lot fees, grants and transfers from other funds.

Infrastructure Improvement Bond Fund

The Infrastructure Improvement Bond Fund accounts for the proceeds of the 2018 General Obligation Limited Tax Bonds and is used to fund street improvements.

Five-Year Capital Improvement Program schedules and detailed project sheets for each capital item included in the FY 2019 Budget are included in this document.

Buildings and Improvements – Five Year Capital Improvement Program

The Buildings and Improvements section of the Capital Improvement Program (CIP) identifies proposed improvements to the Village Hall, including the Police and Fire Department areas, as well as the Public Works Garage. Proposed improvements may include repair, replacement or the rehabilitation of Village buildings. Building improvements at the Water Pumping Station are also included.

As with other sections of the CIP, these improvements are targeted for specific years and are financed through various methods such as the General Fund, Water and Sewer Fund, Capital Equipment Replacement Fund and the Capital Improvement Fund (CIF).

Improvements planned for FY 2019 include:

Improvement	Cost of Improvement	Funding Source	Nature of Project
Village Hall Second Floor Improvements	\$ 90,740	CIF	Recommended
Garage Improvements	\$ 120,000	CIF	Critical
Pumping Station Improvements	\$ 25,000	WS	Critical
Total	\$ 235,740		

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

Critical projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

FY 2018 - \$304,440

Project Description & Justification

The Village Hall, located at 400 Park Avenue, was constructed in 1999 and houses the Village's administrative Staff, both the Police and Fire Departments, and the West Suburban Consolidated Dispatch Center (WSCDC). The second floor of the Village Hall houses various staff workspaces, the Dispatch Center and the "Front Counter" where day to day business transactions between the Village and customers take place.

On any given day the Front Counter experiences a significant amount of foot traffic as residents and others pay bills, seek to discuss sensitive public safety matters, settle matters that were decided at monthly hearings, apply for building permits or various Village licenses and more. Space restrictions at the front counter make it difficult to process multiple customers at one time and may result in delayed customer service. Conference room space is also limited and in high demand, making it difficult to utilize those spaces to meet customer service needs.

Beyond the front counter is the office space and workstations of various Village employees. Many of the furnishings and fixtures were purchased gently used several years ago and are no longer consistent with the workspace efficiency needs of today's staff and operations. Finally, the layout of the workstations, fixtures and equipment do not provide the flexibility needed to accommodate staff changes. Once per week the Village utilizes a conference room as a staff workstation. When auditors are on site each year an alternative work station must be identified and the conference room is no longer available to accommodate customer needs. Further, there is a significant amount of space dedicated to the storage of paper files, however, the Village's robust electronic records management program has eliminated the need for some of the space. It can now be utilized for other purposes.

Village staff originally proposed a multi-phase Village Hall efficiency improvement and modernization project that would be completed over a three-year period at a total cost of \$667,460. The scope of the project has since been modified to achieve cost savings and reduce the overall project cost to \$395,180. The three phases of work will be completed at one time with the bulk of the costs incurred in by the end of FY 2018 and the remaining work completed during the first quarter of FY 2019. The scope of work includes reconstruction of front counter area and lobby to better serve customers, reconfiguration of workstations in the general office area and replacement of carpet.

Project Alternative

Because this project is anticipated to be substantially complete in FY 2018, there is no alternative proposed to complete the remaining work in FY 2019.

Buildings and Improvements - Public Works

Public Works Garage Improvements

FY 2019	\$120,000	CIF
FY 2020	\$70,000	CIF
FY 2021	\$0	CIF
FY 2022	\$0	CIF
FY 2023	\$0	CIF

Critical

Recommended

Contingent on Funding

Spending History

FY 2018	\$265,189 (East, North, and South Wall Repair/Replacement and Replacement of 38 Windows)
FY 2017	\$432,095 (Roof Replacement and West Parapet Wall Replacement)
FY 2016	\$10,000 (Structural Engineering Analysis)

Project Description & Justification

The Public Works Garage, located at 45 Forest Avenue, is the facility that houses all vehicles, equipment, fuel (unleaded and diesel), road salt, and other materials (stone, asphalt, topsoil, etc.) and supplies necessary for Public Works Operations and Water/Sewer Divisions. The majority of janitorial and minor maintenance tasks and operations are performed and coordinated by Public Works personnel. Tasks and operations that cannot be performed in-house are outsourced.

The property on which the Public Works Garage stands was previously considered for redevelopment. As a result, the Village delayed needed improvements based on the possibility of site redevelopment.

Based on a structural engineering analysis and facility site assessment, the following critical and recommended facility improvements should be completed in FY 2019:

<u>Repair/Improvement</u>	<u>Estimated Cost</u>	
1. Grind & re-point west facing exterior wall	\$ 70,000	FY 2019
2. Replacement of windows, flag pole and "Public Works" sign on west side of the building	\$ 50,000	FY 2019
Total	\$ 120,000	

The following prioritized facility improvements are recommended in the **next two to five years**:

<u>Repair/Improvement</u>	<u>Estimated Cost</u>	<u>Year</u>
1. Replace salt storage shed	\$ 50,000	FY 2020
2. Replace two overhead garage doors	\$ 20,000	FY 2020
Total	\$ 70,000	

2019 Recommended Projects

The following is a summary of the improvements that are proposed for FY 2019:

1. Grind and re-point west facing exterior wall: Most of the bricks along all west exterior wall of the building are in need of tuck-pointing. This process would also match the existing bricks to the newly installed bricks in terms of mortar condition and stability.
2. Replacement of windows, flag pole and "Public Works" sign on west side of the building.

Project Alternative

The alternatives to the projects listed would be just to delay the work, which will result in further structural damage to the exterior walls of the building. If this deterioration continues, a project involving the replacement of the entire walls, or sections of walls, will be necessary and significantly more costly as that work may impact load bearing walls/structures in the facility.

FY 2023	\$0	WS

Critical

Recommended

Contingent on Funding

Spending History

FY 2018	\$98,500	Replace lower roof, 2nd floor windows and boiler with combination HVAC system
FY 2017	\$4,995	(Replace/add exterior lighting fixtures)
FY 2016	\$22,600	(Replace front door)

Project Description & Justification

The Pumping Station, located at 7525 Berkshire Street, is the facility that houses all pumps, piping, valves, and auxiliary equipment (including the SCADA controls) that are all central and critical to the operation of the Village's water distribution system. The majority of janitorial and minor maintenance tasks and operations are performed and coordinated by Water Division personnel. Tasks and operations that cannot be performed in-house are outsourced.

In 2013, the Village retained the services of DTZ (a UGL Company) to conduct a Facility Condition Assessment of the Pumping Station. The purpose of the assessment was to evaluate the overall condition of the buildings and sites, and provide information regarding the condition and life expectancy of the major components. The report summarizes the recommended projects involving improvements and maintenance to this facility.

The following critical and recommended facility improvement should be completed in FY 2019:

<u>Repair/Improvement</u>	<u>Estimated Cost</u>
1. Relocate ComEd owned transformers	\$25,000
Total	\$25,000

The following prioritized facility improvement is recommended in the **next two to five years**:

<u>Repair/Improvement</u>	<u>Estimated Cost</u>	<u>Year</u>
1. Repair chimney and stucco coating	\$10,000	FY 2020
Total	\$10,000	

2019 Recommended Projects

The following is a summary of the improvement that is proposed for FY 2019:

1. Remove ComEd owned transformers from inside facility: The building currently houses three large high voltage transformers owned by ComEd and used to provide power to the building and equipment. The transformers are separated from the common areas of the building, however, they share a common wall that contains all of the power and electrical switching equipment for the facility and pump operations. Failure of one or more of the transformers could result in: 1) Damage to electrical switching equipment; 2) A fire in the facility (The room does not contain a fire suppression system); 3) Contamination of the facility from cooling oil that is used inside the transformers. Each of these scenarios could interrupt pump operations, resulting in the loss of water to the community. Staff has received a preliminary estimate from ComEd for \$20,000 to remove the transformers and mount them on a utility pole outside the facility.

Project Alternative

There are essentially no alternatives to these improvements and maintenance projects as the Pumping Station is a critically important facility that houses the operations center for the Village's water distribution system. Deferring these projects would result in emergency repairs that could increase project costs (compared to soliciting bids/proposals).

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact

Vehicles – Five Year Capital Improvement Program

The Village of River Forest recognizes the importance of maintaining, replacing and purchasing new vehicles to guarantee public safety and the efficient delivery of services. The following is a breakdown of current vehicular levels for all vehicles owned by the Village and the replacement schedule for FY 2019:

Improvement	Number of Vehicles to be Replaced in FY 2019	Cost of Vehicles to be Replaced in FY 2019	Total Number of Vehicles in Fleet
Building	-	\$ -	2
Police	2	\$ 85,983	18
Fire	1	\$ 26,000	10
Public Works	2	\$ 445,000	21
Total	5	\$ 556,983	51

Financing

Projects in this section are financed through the Capital Equipment Replacement Fund (CERF).

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

These projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

<input type="radio"/> Critical	<input checked="" type="radio"/> Recommended	<input type="radio"/> Contingent on Funding	
Make	Dodge		
Model	Charger AWD		
Year	2015		
Cost	\$39,928		
Useful Life	3 yrs		
Current Life	2 yrs		

Project Description & Justification

The estimated cost to replace Squad #2 is \$44,073. The estimated cost of the vehicle incorporates \$9,000/car for equipment and installation, which includes exterior Police markings, light emitting diode (LED) light bar, and miscellaneous items needed to facilitate the installation of major components. The in-service date was May 1, 2015. The current mileage is 40,955 (as of 10/31/2017). The average monthly miles driven is 1,365. Estimated mileage at time of replacement: 59,000. This vehicle will be kept in the fleet as a secondary-line vehicle, and will replace an older secondary fleet vehicle with higher mileage in FY 2019. It should be noted that this vehicle had over ten warranty covered repairs at the dealership, which put the car out of service for over three months. This vehicle purchase was deferred from FY 2018 to FY 2019.

Vehicle Description

This vehicle is a marked squad car used for daily patrol activities. The unit is equipped with laptop computers, moving radar units and forward facing video cameras. As the vehicles are rotated out of the fleet, the laptops, radars, and video equipment will be removed and reinstalled in the new cars.

Maintenance Costs FY 2015-2019	
Routine Maintenance as of November, 2017	\$2,939 (22 @ 133.60)
Cost of Repairs While Under Warranty	\$0
Total Spent on Maintenance and Repairs	\$2,939

Project Alternative

Due to the nature of the use, deferral beyond three years is not recommended for patrol vehicles. The reliability decreases as age increases, and maintenance and repair costs often increase.

Operational Impact

These cars are used extensively for patrol activities, so breakdowns have a direct impact on the department’s ability to respond to requests from residents, provide traffic control, respond to complaints of criminal activity, and perform routine investigations.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
Approximately \$2,735	Routine maintenance and periodic repairs

Carryover History

This vehicle was scheduled for replacement in FY 2018 but has been deferred to FY 2019.

Vehicles - Fire

Administrative Vehicle - C200

FY 2019

\$26,000

CERF

Critical

Recommended

Contingent on Funding

Make Ford
 Model Crown Victoria
 Year 2006
 Cost \$23,145
 Useful Life 6 years
 4 years fleet (training & pool)
 Current Life 11 years

Vehicle Description

C200 is the administrative vehicle assigned as transportation for training. The vehicle is purchased through the State of Illinois Central Management Service (CMS) program or at a local dealer that will match the cost in the State Purchasing program. This vehicle is outfitted with emergency lights and siren for emergency response and administrative function. The replacement vehicle will become the Chief's vehicle.

Vehicle	Year	Date	Road Mileage
C-200	2006	11/2017	142,290

Maintenance Costs for Past 2.5 Years

Routine Maintenance as of November, 2017	\$123 (2 items)
Cost of Repairs	\$3,133 (6 items)
Total Spent on Maintenance and Repairs	\$3,256

Project Alternative

- Purchase an all-wheel drive SUV to place in service for severe weather conditions. This provides better traction ability during response in extreme weather conditions (four wheel vs. two wheel drive).
- Purchase a Hybrid, Electric or Natural Gas vehicle for fuel efficiency. This will require the installation of a refueling/recharging system or identification of a system nearby.
- Maintain current vehicle for another year and re-evaluate next budget.

Operational Impact

This vehicle was originally scheduled for a five year useful life that was extended to 11 years. This vehicle will be traded-in or sold at auction and removed from the Village fleet.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
Normal reduction in maintenance costs; \$500 Preventative maintenance	Reduce maintenance on fleet by providing new, warranty driven apparatus, replacing older, costlier vehicle

Carryover History

This vehicle was carried over from FY 2012

CERF/WS

Critical

Recommended

Contingent on Funding

Make Dodge
 Model Sprinter Cargo Van
 Year 2006
 Purchase Cost \$32,088
 Purchased FY 2006
 Useful Life 10 years
 Current Life 13 years

Vehicle Description

Various personnel in the Water Division use this cargo van. The vehicle is equipped with emergency lighting, a 2000 watt AC converter and two-way radio.

Total Vehicle Miles	54,871 (As of 10/26/2017)
---------------------	---------------------------

Recent Maintenance Costs

Date	Maintenance Performed	Cost
7/2013	Repair headlight and change cabin air filter	\$153.00
10/2013	Replace driver's side wiper arm	\$57.00
6/2014	Replace fan belt	\$29.88
6/2014	Replace fan belt and pulleys	\$544.82
6/2015	Replace batteries	\$226.50
3/2016	Repair transmission	\$668.68
3/2016	Repair transmission	\$1,026.55
6/2016	Repair tail light, and blower motor	\$161.49
7/2016	Repair AC system	\$1,699.69
7/2016	Repair body damage	\$725.00
10/2016	Repair blower motor	\$100.00
12/2016	Repair heater	\$870.00
5/2017	Replace water pump and rear brakes	\$2,281.00
Total		\$8,543.61

Project Alternative

This van was scheduled for replacement in FY 2016. Staff recommended replacing this vehicle in FY 2018 with a service body vehicle (pictured above right), but it was determined that the cost of the replacement vehicle exceeded the budgeted amount. As a result, staff suggested deferring the vehicle purchase another year to FY 2019 and adding additional funds to purchase a replacement. The old vehicle would be retained as a fully depreciated vehicle until major repairs are necessary, at which time it would be sold at auction.

Operational Impact

Used by the Water Department to carry all tools and equipment needed for water meter installations, meter readings, fire hydrant repairs, and water main breaks.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact

Contingent on Funding

Make Vac-Con
 Model
 Year 2007
 Purchase Cost \$231,537
 Purchased FY 2008
 Useful Life 12 years
 Current Life 11 years

Vehicle Description

This is the only vehicle of its type in the fleet and is used for routine sewer cleaning and responding to emergency sewer backups. The vehicle gives staff the ability to use high pressure water to jet clean and root cut sewer main lines. It is also equipped with a powerful vacuum system that removes debris from catch basins and sewer lines.

Total Vehicle Miles/Hours	11,683/4040 (As of 10/28/2016)
---------------------------	--------------------------------

Recent Maintenance Costs

Date	Maintenance Performed	Cost
2/2013	Replace both batteries	\$208.00
5/2013	Replace PTO shaft	\$835.00
10/2013	Replace suction tubing and water valves	\$1,400.00
6/2014	Replace gaskets, gauges, catch basin flange, reducer hose	\$550.00
8/2014	Replace suction hose	\$205.00
5/2015	Replace fuel injectors	\$9,947.78
5/2015	Replace water valve and suction hose	\$364.31
11/2015	Repair hydrostatic pump	\$1,938.38
1/2016	Replace in-out box on debris body	\$8,984.16
12/2016	Oil change, air, fuel, and oil filters	\$250.00
9/2017	Replace upper suction tube	\$220.00
10/2017	Replace lower suction tube, flange and clamp	\$215.00
10/2017	Replace main hydraulic pump	\$11,000.00
Total		\$36,117.63

Project Alternative

Alternative is to contract sewer cleaning.

Operational Impact

This piece of equipment was scheduled for replacement in FY 2020. Staff recommends replacing this vehicle in FY 2019 as the Village has incurred numerous expensive repairs totaling almost \$40,000 since it was purchased. Worn major parts and rust have contributed to the majority of repairs. This vehicle is used to clean and televise all Village sewers and operates almost daily from early spring to late fall. It is also capable of hydro excavating areas in the parkway and roadways. Staff also recommends selling the old equipment at auction to offset the cost of the new unit.

Equipment – Five Year Capital Improvement Program

The Equipment section of the Capital Improvement Program (CIP) identifies which capital equipment items need to be repaired, replaced or acquired new over the next five years. This section of the CIP identifies all equipment other than vehicles, which are noted in their own section of the CIP.

As with other sections of the CIP, these improvements are targeted for specific years and are usually financed through the Capital Equipment Replacement Fund (CERF). The following improvements are proposed for FY 2019:

Equipment	Cost of Equipment	Funding Source	This Project is:
Pole Mounted Radar	\$ 25,605	CERF	Recommended
SCBA Breathing Air Compressor (FD)	\$ 45,000	CERF	Recommended
Alerting System (FD)	\$ 61,000	CERF	Critical
Chipper 1800 Model (PW)	\$ 90,000	CERF	Critical
Total	221,605		

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

These projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

Equipment - Police

Pole Mounted Radar Speed Display Signs **FY 2019** **\$25,605** **CERF**

Critical Recommended Contingent on Funding

Original Purchase Date

Cost

Funding History

New Equipment

Project Description & Justification

The Pole Mounted Radar Speed Display Signs are cost-effective solutions for traffic calming in residential neighborhoods, park areas, school zones, business districts, financial districts, and any location where vehicular, pedestrian, and bicyclist traffic are intermingled. The highly visible signs are strategically placed to get drivers' attention and provide an immediate reminder to slow down. The signs act as a 24-hour a day force multiplier to police patrol units and can be used to address/monitor citizen driven complaints. The signs assist in the Village's mission to provide professional public safety services and reduce accidents. The Public Works and Police Departments work together to identify locations where vehicles are known to travel at higher rates of speed and where increased risks to the general public need mitigation. The new pole mounted signs have software with the ability to conduct traffic counts and calculate average speed traveled, which will be beneficial to both the Police and Public Works Departments for engineering and enforcement analysis. In addition, the use of this type of software assists with providing accurate data for grant writing opportunities.

The Pole Mounted Speed Radar Signs come in two versions, a dual display with speed and message display, and the other a single speed display. The dual display requires hard wiring to be powered, while the single speed display can be solar powered. The dual hard-wired sign costs \$4,696 and the single solar equipped sign costs \$3,839. Staff recommends the purchase of six total signs split between hard-wired and solar, for a cost of \$25,605.

Project Alternative

The alternatives to this equipment would be to have increased use of officers monitoring multiple areas for speeding violations and to purchase additional Speed Radar Trailers. Having speed radar equipment that can be mounted permanently or for extended periods of time is a more effective and efficient use of Village resources.

Equipment - Fire

SCBA Breathing Air Compressor

FY 2019

\$45,000

CERF

Critical

Recommended

Contingent on Funding

Original Purchase Date

FY 1999

Cost

\$17,200

Funding History

N/A

Project Description & Justification

The purpose of this project is to upgrade and replace the Air Compressor that fills the self-contained breathing apparatus (SCBA's). This piece of equipment is a specialized compressor with a specific filtering system necessary to fill the breathing air required for firefighters to enter an IDHL (immediately dangerous to life and health) atmosphere. Staff has delayed the scheduled purchase of a new SCBA air compressor because the current equipment is lasting longer than anticipated. However this piece of equipment is critical during times of fire suppression and training when SCBA's are in use.

Project Alternative

The alternative to this purchase is to continue maintenance of the piece of equipment and keep it usable for as long as possible; however, if the equipment fails and is not repairable immediate purchase would be required.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
\$1,500	Annual maintenance & flow testing after third year.

Carryover History

This item was carried over from FY 2017

Equipment - Fire

Station Alerting System	FY 2019	\$61,000	CERF
<input checked="" type="radio"/> Critical <input type="radio"/> Recommended <input type="radio"/> Contingent on Funding			
Original Purchase Date	FY 2000 (approximate)		
Cost	Unknown		
Funding History	N/A		

Project Description & Justification

The purpose of this project is to upgrade and replace the Station Alerting System in the Fire Station. This equipment is a vital link between the Fire Department and West Suburban Consolidated Dispatch Center. 9-1-1 calls in River Forest are dispatched over the alerting system, providing the quick response times River Forest residents have come to expect.

The current Station Alerting System is approximately 18 years old (or older) and has served the Fire Department well. Over the last two years, the system has required significant repairs and has outlived its useful life. The current system's technology is extremely outdated. Although the system is currently functional, dispatches over the system are difficult to understand, potentially resulting in miscommunication and fire units responding to an incorrect location. Estimates to properly restore the current system to full function are at \$40,000.

A new, state-of-the-art alerting system would provide many improvements. A computerized voice system would be clear and easy to understand. Upgraded speakers throughout the fire station would provide full coverage to all locations in the station. The tone ramp-up system incorporated into the Station Alerting System would prevent a shock to the firefighters' system at night by gradually building volume and light instead of the current full volume system. Message boards will give a visual signal for all dispatches, reinforcing the audio alert.

Project Alternative

The alternative to this purchase is to continue maintenance of the current piece of equipment and keep it usable for as long as possible. However, if the equipment fails and is not repairable, immediate purchase would be required. Lead time for a new system is six to nine months.

A second alternative is to either lease the system or finance the system. A seven year term for either of these options would cost \$10,000 per year.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
\$3,200 – one year after five year warranty period.	Continue annual maintenance after warranty period.

Brush Chipper-1800 Model

FY 2019

\$90,000

CERF

Critical

Recommended

Contingent on Funding

Make Vermeer
 Model BC1800
 Purchase Cost \$29,755
 Purchased FY 2000
 Useful Life 10 years
 Current Life 19 years

Project Description & Justification

This unit (1800 model) is one of two chippers used by the Public Works Department to chip tree debris. The unit has a capacity to chip branches and logs up to 18-inches in diameter that are associated with tree removals, tree trimming, and emergency storm damage cleanup. This brush chipper is considered the workhorse of the Village's forestry operations and is utilized during the initial response to tree damage caused by storms. There are over 8,500 parkway trees in the Village that are maintained by the Public Works Department.

Total Equipment Hours	5,087 (As of 10/26/2017)
-----------------------	--------------------------

Recent Maintenance Costs

Date	Maintenance Performed	Cost
7/2011	Oil pressure sensor	\$50.00
8/2016	New axle	\$2,700.00
9/2012	Radiator cap, thermostat, engine diagnostics	\$300.00
12/2012	Rebuild starter	\$475.00
2/2013	Rebuild engine	\$8,158.00
9/2013	Replace hood latches	\$39.00
9/2013	Repair loose belt and leaking injector	\$218.00
9/2014	Sharpen blades	\$144.00
7/2015	Replace tensioning pulley and belt	\$678.27
10/2015	Change blades and bolts	\$175.00
6/2016	Change blades and bolts	\$340.84
3/2017	Change blades and bolts	\$330.17
9/2017	Replaced dust cover weldments	\$80.00
Total		\$13,688.28

Project Alternative

This unit was initially scheduled for replacement in FY 2010. Since the unit was in good mechanical condition at that time its replacement was deferred to FY 2014 at a projected cost of \$77,000. Engine problems involving anti-freeze leaking into the engine block required repairs that were completed in February 2013 (FY 2014). These repairs have extended the useful life of the brush chipper by approximately six more years, thus deferring its replacement until FY 2019 when, at that time, Staff will further explore replacing the unit. Until that time, and unless the unit breaks down and cannot be repaired, Staff will continue using the brush chipper and paying for repairs on an as-needed basis.

Operational Impact

The elimination of this brush chipper would reduce the chipping capacity by approximately 70% and would result in the need to contract tree and brush chipping operations for larger sized debris, including emergency storm response.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
None	None

Carryover History

This item was originally scheduled for replacement in 2010 but its replacement was deferred. In FY 2014 it was determined it was more cost effective to perform significant repairs that extended the useful life of the equipment.

Information Technology – Five Year Capital Improvement Program

The Village’s Information Technology (IT) function is responsible for purchasing and maintaining all computer systems and personal computers, providing technical support to all systems and supervision of village hired consultants and vendors. In FY 2016 the Village entered into an agreement with ClientFirst to provide day-to-day and project specific IT support services. ClientFirst prepared a strategic information technology business plan in FY 2012 for the Village and updated it in preparation for the CIP. This plan evaluated the Village’s hardware and software capabilities to determine any possible improvements that could be made in order to fully meet the Village’s business needs, including:

The following improvements are proposed for FY 2019:

Equipment	Cost of Equipment	Funding Source	This Project is:
IT Strategic Plan	\$ 20,000	CIF	Recommended
Network Improvements	\$ 18,300	CIF	Critical
Software Upgrades	\$ 40,000	CIF	Recommended
Computer Replacements	\$ 38,000	CIF	Recommended
Audio Visual System	\$ 90,000	CIF	Recommended
IT Security Initiatives	\$ 52,360	CIF	Critical
Total	\$ 258,660		

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

These projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

Critical

Recommended

Contingent on Funding

Funding History N/A

Project Description & Justification

Currently, the Village is reactive to the needs of its residents and Staff when it comes to technology. Creating an IT strategic plan will help the Village create a five-year plan for technological needs. This plan will act as a guide and, as such, will be reviewed and refined on an annual basis as part of the CIP and budget process. This plan will review current application usage and identify areas for improved utilization and more efficient business processes. The plan will consider improvements in transparency and customer service in addition to improved operational efficiencies. The cost of this project consists entirely of consulting hours and it is estimated that the final report will take approximately 135 hours to create.

Project Alternative

An alternative to this plan would be to continue operating in a reactive manner and address IT system issues as they arise. While this plan is recommended by the Village's IT consultant, ClientFirst, it could be deferred to a future Fiscal Year if funding is not available.

Funding History

FY 2018 \$ 20,300

Project Description & Justification

Recommended for FY 2019

Server Upgrade - \$18,300

The Village currently has twelve legacy virtual servers running predominantly Windows 2008. These servers should be upgraded to a more current and secure operating system version of 2012 or later. This initiative will also allow for the decommissioning of three legacy servers that are no longer supported or needed in the production environment. Completing this project will stabilize the Village's environment and prolong the life of the current equipment, before replacing fully in a few years.

Recommended for FY 2022

Server Replacement - \$100,000

The Village's current server can be upgraded in FY 2019 as proposed above, but will ultimately need to be replaced.

SAN (Storage Area Network) Replacement - \$60,000

A SAN (storage area network) is a high performance shared data storage solution. The SAN allows all servers to have access to the same data and provide server redundancy. The Village currently has one SAN with two expansion shelves in the production environment. The Village then utilizes its other SANs for backup storage to extend the useful life of the hardware. This project is proposed to compliment the server replacement project in FY 2022.

Hardware/Software/Licensing	\$45,000
Consulting	\$15,000
Total	\$178,300

Project Alternative

Alternatives to both projects is to continue with the status quo or defer the project to a later date, however, it is not recommended. The Village continues to move toward management of its computer network based on best practices and these recommendations are consistent with that approach.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact

Information Technology

Software Upgrades	FY 2019	\$40,000	CIF
	FY 2020	\$21,240	CIF
	FY 2021	\$0	CIF
	FY 2022	\$0	CIF
	FY 2023	\$0	CIF

Critical

Recommended

Contingent on Funding

Funding History	N/A
FY 2018	\$85,500

Project Description & Justification

Recommended for FY 2019

Land and License Management Software - \$40,000

The Village's ERP, Springbrook, was acquired by Accela. After the acquisition the Village was informed that Springbrook would continue to support the existing land management module that is utilized to process building permits and various Village licenses but that there would be no future enhancements. During FY 2018, Village staff evaluated several Land and License Management Software options including that offered by Accela. Due to the experience that the Village's IT consultant has had implementing the Accela solution with other clients, it is not being recommended at this time. This project is being deferred from FY 2018 to FY 2019 because the appropriate solution has not yet been identified. The utilization of software for this purposes is critical to Village operations and customer service. Modifying the program used to collect and process this information could provide opportunities for more efficient operations, including better customer access to real-time data, better project tracking tools, better integration with the Village's GIS, increased opportunities for constituent self-service and more.

Recommended for FY 2020

Laserfiche Upgrades - \$21,240

The Village has been utilizing the Laserfiche document imaging program for several years to electronically store Village records. This has reduced physical storage needs at the Village Hall and improved productivity by making records easier to locate and reproduce when needed. A web portal into Laserfiche would streamline the process of making those records available online. Further, a web portal that is integrated with Laserfiche forms and the workflow process would allow the Village to make various applications available online and would streamline the submission, receipt, review and storage of those documents. Further, integration between records stored in Laserfiche with GIS would further streamline the search and retrieval of property-specific records. Various upgrades to the Laserfiche system, over time, will allow the Village to achieve these efficiencies and improve access to records.

Land and License Management Software	
Hardware/Software/Licensing	\$35,000
Consulting	\$5,000
Laserfiche Upgrades	
Hardware/Software/Licensing	\$18,000
Consulting	\$3,240
Total	\$61,240

Project Alternative

Laserfiche improvements could be deferred to allow for more critical projects to proceed. Staff can continue to utilize the current functions of Laserfiche as is today.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
\$24,000 \$5,550 in FY 2020, \$8,550 in FY 2021	<i>Land & License Management:</i> Annual cost of subscription for individual users (\$200/month/user with an estimated 10 users; this cost may be reduced if fewer users are identified). <i>Laserfiche:</i> Annual maintenance and licensing fee for Laserfiche was previously \$5,550. Adding the WebLink feature would increase the annual cost by \$3,000.

Information Technology

Computer Replacements	FY 2019	\$38,000	CIF
	FY 2020	\$102,000	CIF
	FY 2021	\$38,000	CIF
	FY 2022	\$38,000	CIF
	FY 2023	\$38,000	CIF

Critical

Recommended

Contingent on Funding

Funding History

N/A

FY 2018 \$43,490

Project Description & Justification

The purpose of this program is to upgrade the central processing units (CPUs) of the Village desktop and laptop computer inventory. The estimated service life of a computer is four to six years; however, the Village generally does not recommend keeping equipment after its warranty has expired. Replacements are prioritized based upon the job responsibilities of employees and some workstations may be assigned older but serviceable PCs while other workstations may receive a new computer on a more frequent basis. Currently, the Village owns 49 desktop computers and 38 laptop computers.

Staff and the Village's IT consultant have updated the inventory of Village-owned IT/communication equipment, identifying warranty periods for each piece and determining a replacement schedule. Based on that information, equipment can be rotated out when warranties expire. Funding IT replacements in this manner will standardize equipment throughout the organization, allow the Village to obtain bulk purchase pricing, improve IT support service efficiency, improve staff efficiency with fewer projected system interruptions, enhance system security, and avoid unnecessary spikes in IT expenses.

Public Safety In-Vehicle Laptops

Funding in FY 2020 is higher than other years due to the replacement of Police and Fire Department in-vehicle ruggedized laptops. The laptops that are in the public safety vehicles are specialized Panasonic Toughbooks that are tailored to the operating environment (a vehicle) and nearly constant usage for 24-hour shift operations. It is recommended that these machines are replaced every four years to maintain a stable and responsive platform for public safety personnel and ensure minimal downtime. The machines that are currently deployed were purchased in the Spring of 2015 and hold a three year warranty. To accommodate the new CAD system these machines received upgraded hard drives and memory in FY 2017. It is recommended that the entire fleet of computers is replaced at one time to avoid differences in models that can cause operational issues for both Police and IT. This cost also includes accessory items such as in-car mounts.

Periodic replacement of peripheral equipment such as monitors, keyboards and printers may still be required on an ad hoc basis and money has been set aside for that purpose in the General Fund.

PC Replacement	
Hardware/Software/Licensing	\$30,000
Consulting	\$8,000
Total	\$38,000

Project Alternative

If this project is not funded, computers would continue to be replaced in smaller quantities and over a longer period of time, potentially reducing the productivity of the units and ability to support newer versions of software. A possible alternative to the spike in FY 2020 is splitting the cost of the public safety in-vehicle laptops over two years. This is not recommended due to the complications that may be created by having multiple models in the field, however, if this option is selected staff will work to ensure that the number of models is minimized. In FY 2020, when the Panasonic Toughbooks are scheduled for replacement, the Village will explore product alternatives to see if there is a lower cost solution that is compatible with a more ruggedized environment.

	FY 2023	\$0	CIF

Critical

Recommended

Contingent on Funding

Funding History

N/A

Project Description & Justification

The Village purchased Audio/Visual equipment for use in the Community Room and second floor Conference Room in 2010. The functionality of the existing equipment has become more unreliable during FY 2018. Previous CIPs contemplated replacement of this system in FY 2021 at a cost of \$125,000. However, due to ongoing service issues, advances in technology, and the degree to which the Village relies on this equipment for public meetings and transparency, it is recommended that funding be accelerated and the system be replaced in FY 2019. It is believed that \$90,000 is the maximum cost and that the cost can be lowered as the Village continues to refine the scope of the system.

Project Alternative

Staff will continue to monitor system performance, annual maintenance costs and determine whether its replacement should be expedited or deferred.

	FY 2023	\$0	CIF

Critical

Recommended

Contingent on Funding

Spending History N/A

Project Description & Justification

Security Audit - \$15,000

In the recent years, the Village has undergone major changes and improvements to its IT infrastructure. Additionally, new cyber threats and attacks are continually increasing. As a measure of protection, it is recommended that the Village complete a security audit. This process would involve a third party vendor (separate from the Village's usual IT vendor) conducting a security audit of all systems. This includes penetration testing from inside and outside the network. Doing so will test past implementations and identify areas for improvement.

Laserfiche and Springbrook Active Directory Authentication - \$2,140

The Village is currently maintaining multiple applications and each has its own authentication method. This initiative will combine the authentication methods of the more commonly accessed systems. Once this is complete, it will be simpler to maintain security compliance regulations by only needing to make changes in one location.

CJIS Compliance - \$6,400

The Criminal Justice Information Systems (CJIS) outlines best practices that need to be observed to ensure that the proper security is being applied to all information related to criminal justice. This initiative provides funding for changes that may be required as a result of CJIS Compliance results.

Password Policy - \$5,160

The Village currently has limited guidelines on how passwords should be created, updated, and shared. This initiative will allow the Village to work with the IT Consultant on creating a Password Policy following industry best practices and is required under CJIS Compliance listed above. Once the new policy is created, it will be implemented throughout the Village.

Network Monitoring Tools and Implementation - \$4,340

A network monitoring tool is the use of a system that constantly monitors a computer network for slow or failing components and then notifies the network administrator (via email, SMS or other alarms) in case of outages or other trouble. Network monitoring is part of network management. The Village has many network devices that need to be monitored. The Village will benefit from a tool that will notify IT staff when a failure occurs or may occur so the IT staff can take corrective action before the issue results in significant downtime.

Firewall Replacement - \$12,800

A firewall is a network security device that monitors incoming and outgoing network traffic and decides whether to allow or block specific traffic based on a defined set of security rules. Firewalls have been a first line of defense in network security for over 25 years. They establish a barrier between secured and controlled internal networks that can be trusted and untrusted outside networks, such as the internet. The Village currently has a firewall to protect against outside threats over the internet. This is vital piece of hardware that needs to be maintained and updated as the threats and technology change. The Village's current firewall is no longer under warranty and therefore has limited functionality. In addition, the existing firewall will not support the planned increase in internet bandwidth.

Two-Factor Authentication Policy - \$6,520

Two-Factor Authentication, also known as 2FA, two step verification or TFA (as an acronym), is an extra layer of security that is known as "multi factor authentication" that requires not only a password and username but also something that only that user has on them, i.e. a piece of information only they should know or have immediately to hand - such as a physical token. Some staff require access to the Village resources after hours to monitor systems or perform assigned tasks. Currently there are several different solutions in place to accomplish this need. The Village would like to consolidate down to a single method that can be audited as needed. As a part of the CJIS compliance any remote connections to the network should require two factor authentication.

Project Alternative

Each of these projects is integral in the Village's continual effort to keep its IT network secure. An alternative to the project would be to prioritize initiatives and implement them as funds allow over a longer period of time.

Project Impact

Annual \$ Impact on Operating Budget	Description of Operating Budget Impact
\$2,500	<i>Network Monitoring Tool:</i> Annual cost of licensing
\$2,500 in FY 2022	<i>Firewall:</i> Annual support and maintenance is included in the purchase for the first three years. Cost for support and maintenance in FY 2022 is estimated to be \$2,500.

Streets Improvements – Five Year Capital Improvement Program

The Village of River Forest recognizes the importance of consistently maintaining its streets, sidewalks and alleys to ensure the safety of drivers and pedestrians.

Street System Overview

The Village has 31.6 miles of centerline streets. The recommended funding level for the next five years will maintain the average street rating in a good or excellent condition. The Village conducts an annual pavement inventory study and has implemented a microsurfacing and crack sealing program to prevent degradation of the streets. The Village rates streets as follows:

Streets		
Surface Condition	Pavement Ranking	Estimated Remaining Life
Excellent	7.6 – 9.0	15 to 20 years
Good	6.1 – 7.5	10 to 15 years
Fair	4.6 – 6.0	6 to 10 years
Poor	1.0 – 4.5	2 to 5 years

Sidewalk & Curb System Overview

The Village of River Forest recognizes the need to have a network of safe pedestrian accesses throughout the community. The primary emphasis of the sidewalk program is to ensure the safety of the Village’s sidewalks. To that end, the Village funds 100% of the replacement cost of sidewalks in immediate need of replacement.

The following improvements are proposed for FY 2019:

Improvement	Cost	Funding Source	Nature of Project
Street Patching	\$ 60,000	GF - \$50,000 WS - \$10,000	Critical
50/50 Sidewalk, Curb & Gutter	\$ 65,000	GF - \$55,000 WS - \$10,000	Critical
Alley Improvement Program	\$ 950,000	CIF	Recommended
Street Improvement Program (SIP)	\$ 450,000	MFT - \$150,000 WS - \$50,000 IIBF - \$250,000	Critical
Street Maintenance Program	\$ 100,000	GF - \$50,000 MFT - \$50,000	Critical
Surface Transportation Program (STP)	\$ 450,000	WS - \$50,000	Critical
Traffic Signals	\$ 146,000	CIF	Recommended
Parkway Pockets	\$ 20,000	CIF	Contingent
Total	\$ 2,241,000		

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

Critical projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

FY 2015	\$36,906	\$10,000	\$46,906
FY 2014	\$83,970	\$10,000	\$93,970

Program Description & Justification

The purpose of this program is to maintain and improve surface conditions of Village streets and alleys by patching defective areas. This program is intended for streets and alleys of all condition ratings to prolong their useful lives. To accomplish this goal, an annual funding level of \$75,000 to \$100,000 over the next five years is recommended. These funding levels are estimates and reflect inflationary increases

Historically, Village Staff annually inspected all streets and the areas of pavement failure were placed on a patching list, which is provided to the Village's contractor. Village Staff now also includes alleys in their inspections and identifies patching needs throughout the Village. Asphalt pavement patching utilizes hot mix asphalt (HMA), the standard material approved by the Illinois Department of Transportation for surface repairs. Two inches (thickness) of the failing surface pavement is milled and replaced with new HMA. This patching process is more permanent and resilient than the use of asphalt "cold" patch. The ideal timing for this maintenance project is when streets are evaluated with a good condition rating, but showing signs of early deterioration (cracking, potholes, etc.).

Included in this street patching program are Water and Sewer funds (\$10,000 annually) to install HMA patches on street openings created for the repair of the Village's water and sewer systems.

FY 2019 Recommended Project

In FY 2019 a total of \$60,000 is recommended for this maintenance project. Various locations to be patched are identified on a continual basis.

Program Alternative

The primary alternative is to resurface the street. Resurfacing, which is a more costly process, involves not only the replacement of defective surface but also additional surface areas that have not begun to deteriorate.

Spending History

Year	GF	WS	Total
FY 2018	\$53,734	\$10,000	\$63,734
FY 2017	\$51,710	\$10,000	\$61,710
FY 2016	\$47,979	\$8,482	\$56,461
FY 2015	\$60,735	\$4,503	\$65,238
FY 2014	\$47,507	\$1,829	\$49,336

Program Description & Justification

The purpose of this program is to improve the overall condition of public sidewalks and curb/gutters throughout the Village. The objective is to eliminate all trip hazards for pedestrians. To accomplish this objective, an annual funding level of \$50,000-\$75,000 is recommended. Failure to implement a sidewalk improvement program to repair deteriorated/damaged sidewalk can expose the Village to liability resulting from trips and falls.

For the purposes of this program, the Village is divided into three geographical areas. Village Staff conducts annual inspections of one area each year. Over the course of a three year period, all public sidewalks are inspected. Sidewalks are rated according to the displacement of adjoining sidewalk squares that pose a potential for a trip hazard. The following table identifies the sidewalk condition ratings, description of condition, and the recommended action:

Sidewalk Condition	Joint Displacement	Recommended Action
A	> 1/2" but < or = 1"	Consider Replacement
B	>1" but < 1 1/2"	Recommend Replacement
C	>1 1/2" with loose/missing pieces	Replace immediately

During annual inspections, the Village offers participation in the 50/50 sidewalk replacement cost share program upon request for sidewalks with a "B" rating. A copy of the inspection form is delivered to property owners describing the sidewalk's condition and requesting their participation. The Village replaces all sidewalks with a condition "C" rating. The Village also installs detectable warning pads, located at street crossings and intersections, that are designed for the visually impaired. The following is a summary of proposed expenditures for FY 2019:

General Fund

Sidewalk – Condition C (100% Village):	\$35,000
Sidewalk – Condition A or B (50/50):	\$10,000 (revenue - \$5,000)
Driveway Aprons (100% Resident):	\$5,000 (revenue - \$5,000)
Detectable Warning Pads (100% Village):	\$5,000

Water and Sewer Fund

Curb/gutter (100% Village):	\$10,000
-----------------------------	----------

Sidewalk and Curb Annual Inspection Areas:

<u>Area No.</u>	<u>Area Limits</u>	<u>Inspection Years</u>
1	Des Plaines River to Harlem /Hawthorne to Chicago	2021, 2024, 2027
2	Thatcher to Harlem / Chicago to Greenfield	2019, 2022, 2025
3	Thatcher to Harlem / Greenfield to North	2020, 2023, 2026

In addition to the annual inspection of the aforementioned designated areas, Village Staff inspects all sidewalks in close proximity to schools, parks, and commercial/retail areas on an annual basis.

The Village also allows property owners to replace their driveway aprons and private courtesy walks through this program at 100% cost to the property owner (full payment due to the Village prior to commencement of work). The primary benefit to the property owner is that they receive competitively bid pricing for their improvement.

Program Alternative

Although the preferred option is sidewalk replacement, alternatives to this program involve the installation of asphalt cold patch in the displaced joints and/or grinding off the edge of the raised sidewalk. Not only is the patching option aesthetically unattractive, the asphalt can break loose and re-expose the displaced sidewalk that re-establishes liability to the Village and increases maintenance costs.

Another option is mud-jacking, which is a process of filling cavities or voids beneath settling concrete. The Village does not currently own equipment to perform this mud-jacking operation.

FY 2016	\$59,153	(Alleys incorporated into SIP)
FY 2015	\$508,901	(Green Alleys)

Project Description & Justification

The purpose of this program is to improve the condition of Village alleys. To accomplish this objective, a minimum annual funding level of \$200,000 over the next five years is recommended. These funding levels are estimates based on the reconstruction of one alley per year. Additional funds have been budgeted in FY 2019 to accelerate the program. The funding levels also reflect inflationary increases for construction as the actual projects have yet to be identified. In past years, the Village's Alley Improvement Projects utilized a Special Service Area process, which requires a 50/50 cost share with the adjoining property owners. These projects typically involved removal of the top of the asphalt surface (typically 1½ inches) and replacement with new asphalt; however, this method did not address stormwater issues.

Staff will continue to perform further analysis on various permeable surfaces and products to determine the most efficient way to complete these improvements. Many homeowners adjacent to existing impervious alleys experience stormwater drainage problems on a regular basis. To simply replace the impermeable surface with another impermeable surface will not alleviate these issues. Due to the inadequacy of the Village's existing sewer system, the addition of sewers to convey runoff away from the alleys is also not a feasible option. The most economical way to mitigate these issues and provide a new alley surface is through the use of permeable materials.

While Staff conducts the annual Street Rating Survey, the alleys are also rated. This is completed utilizing the same rating system as the streets and is then used to determine the alley(s) that require improvement in a given year.

FY 2019 Recommended Projects

1. Thomas Street Alley (Seventy Two-Hundred Block) – This "T" shaped alley is located between Bonnie Brae, Division Street, Harlem Avenue, and Thomas Street. A portion consists of severely deteriorated concrete pavement while the rest consists of asphalt. The pavement is in poor/fair condition; however, the alley also experiences significant drainage issues during heavy rain events. Improving this alley will necessitate a full reconstruction throughout. Similar to recent alley improvements, all permeable options will be explored in order to determine an appropriate treatment.
2. Local Alley Projects – TBD

FY 2019 Cost Summary for Alley Improvement Plan

Reconstruction of the Thomas Street (7200 block) Alley with permeable material will cost approximately \$300,000. Prior to design and bidding of this project, Staff will research additional types of permeable materials that may more efficiently solve the drainage issues at this location. Due to the high cost and "T" shape of this alley, staff will investigate ways to phase the construction of this project. Two additional alleys will also be reconstructed. These will be selected based on lower alley ratings and will each cost approximately \$325,000.

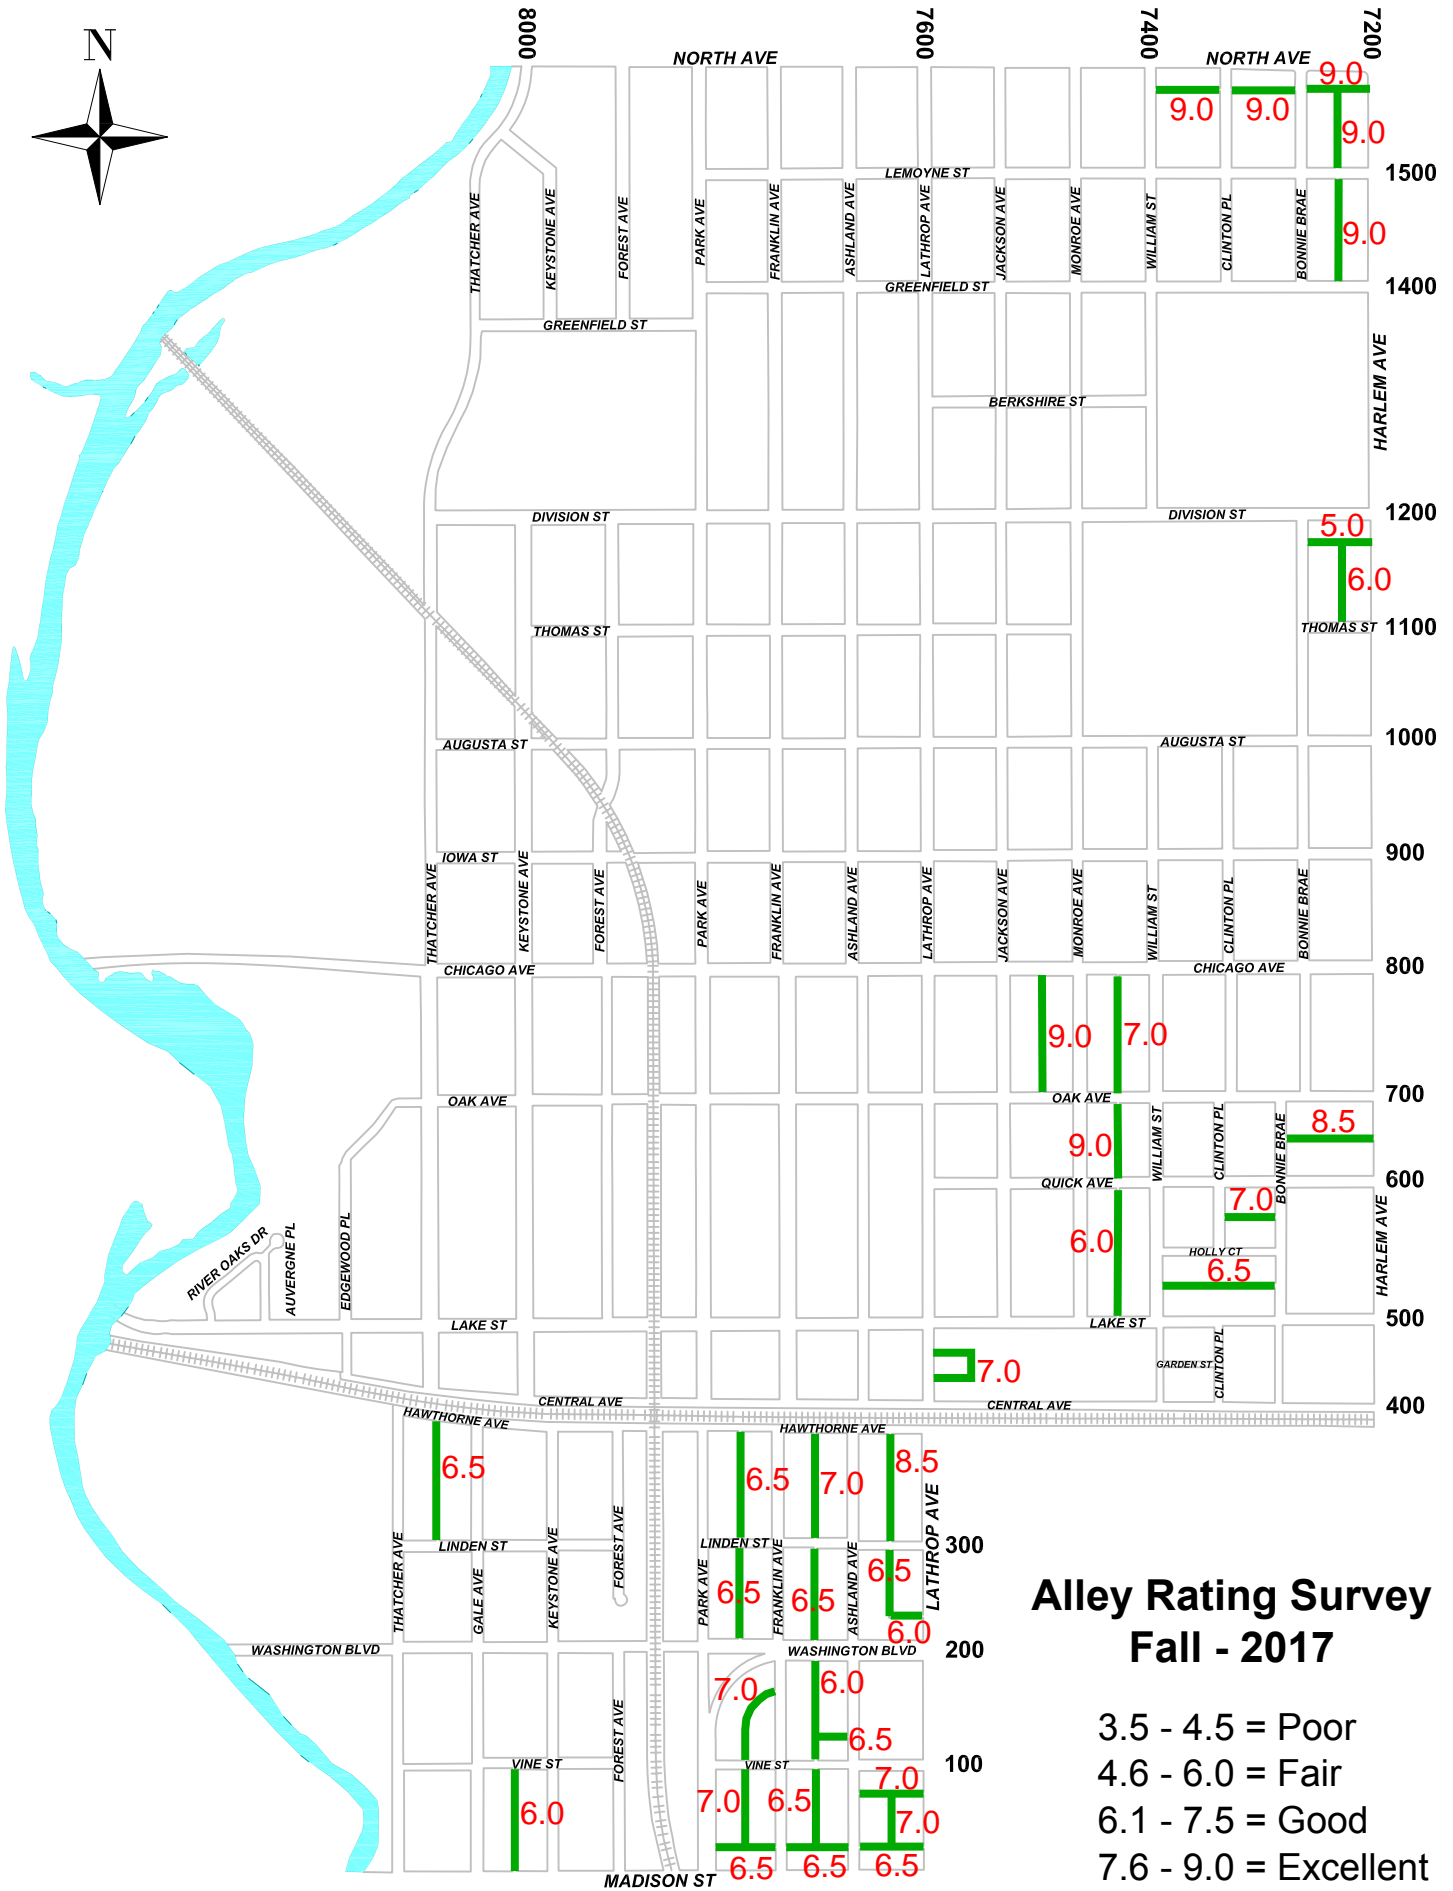

Program Alternative

Not performing any surface maintenance, particularly for alleys in deteriorating conditions, will result in total pavement failure and require reconstruction (of base and surface), which is significantly higher in cost compared to resurfacing.

Extensive pavement patching may be somewhat cost effective initially for alleys with better condition ratings, and may slow down the progression of potholes, but the pavement patching needs will be ongoing. It is also likely to promote the continued deterioration of the pavement's base and will significantly increase eventual resurfacing costs.

FY 2012	\$2,998	(Lot B, sealcoating)

Program Description & Justification

The purpose of this program is to improve the condition of the parking/driving surfaces of Village-owned parking lots. The Village owns and/or maintains six parking lots:

- A. Village Hall – 400 Park Avenue – **Resurfacing Scheduled for FY 2022**
- B. Public Works Garage – 45 Forest Avenue - **Reconstruction Scheduled for FY 2023**
- C. Southeast corner of Lake Street and Park Avenue
- D. West Commuter Lot – 400 block of Thatcher Avenue
- E. East Commuter Lot – 400 block of Thatcher Avenue - **Resurfacing Scheduled for FY 2020**
- F. Lot on south side of 7915-7919 North Avenue – contiguous to CVS parking lot

Several options are available for improving parking lots, including full reconstruction, resurfacing, asphalt patching, seal-coating, and crack sealing.

2019 Recommended Projects

There are no parking lot improvements scheduled for FY 2019.

Program Alternative

Not performing any surface maintenance, particularly for lots with deteriorating conditions, will result in total pavement failure and require reconstruction (of base and surface) which is significantly higher in cost compared to resurfacing. Extensive pavement patching, crack sealing, and seal-coating is a cost effective option and may slow down the progression of potholes, but the pavement patching needs will be ongoing and could allow for the continued deterioration of the pavement’s base. This will significantly increase eventual resurfacing costs.

Spending History

Year	MFT	WS	Total
FY 2018	\$188,000	\$38,000	\$226,000
FY 2017	\$150,000	\$52,898	\$202,898
FY 2016	\$393,243	\$47,964	\$441,207
FY 2015	\$169,558	\$20,460	\$190,018
FY 2014	\$233,610	\$108,000	\$341,610

Program Description & Justification

The purpose of this program is to improve the condition of local streets. The objective is to improve all streets with condition ratings of “Fair” or “Poor” to condition ratings of “Good” to “Excellent.” This program does not include capital improvements on state routes.

Each year, Village Staff visually inspects all local streets and rates them according to the condition of the pavement, curb and gutters, and drainage. Streets rated “Poor” or “Fair” are prioritized for one of the construction options (rehabilitation, resurfacing, or reconstruction) depending on their condition, location, and estimated traffic volumes. The timing in improving streets is critical. Waiting too long to address some streets in the poor to fair condition will result in the condition deteriorating to a point where a more expensive reconstruction will be necessary versus a resurfacing.

The following tables summarize the street rating systems:

Streets		
Surface Condition	Pavement Ranking	Estimated Remaining Life*
Excellent	7.6 - 9.0	15 to 20 years
Good	6.1 - 7.5	10 to 15 years
Fair	4.6 - 6.0	6 to 10 years
Poor	1.0 - 4.5	2 to 5 years

*Life estimate is based upon time frame needed for resurfacing assuming a regular maintenance program.

FY 2019 Recommended Projects

<u>Street</u>	<u>Pavement Rating</u>
1. Monroe Ave from Division to Augusta	Fair
2. Jackson Ave from Division to Augusta	Fair
3. Thomas St from Lathrop to Monroe	Fair
4. Franklin Ave from Central to Lake	Fair

- | | |
|---|------|
| 5. Ashland Ave from Lake to Oak | Fair |
| 6. William St from Chicago to Oak | Fair |
| 7. Quick Ave from Bonnie Brae to Harlem | Fair |

The projected cost to resurface these streets and make other associated improvements is \$450,000.

While the Capital Improvement Plan proposes funding for street improvements through FY 2023, these locations have not yet been determined. Staff recommends a funding level of \$300,000 for each of those years with the specific locations selected based on annual street ratings surveys.

Program Alternative

Not performing any roadway maintenance, particularly for streets in “Poor” condition, will result in total pavement failure and require reconstruction (of base and surface), which is significantly higher in cost compared to resurfacing.

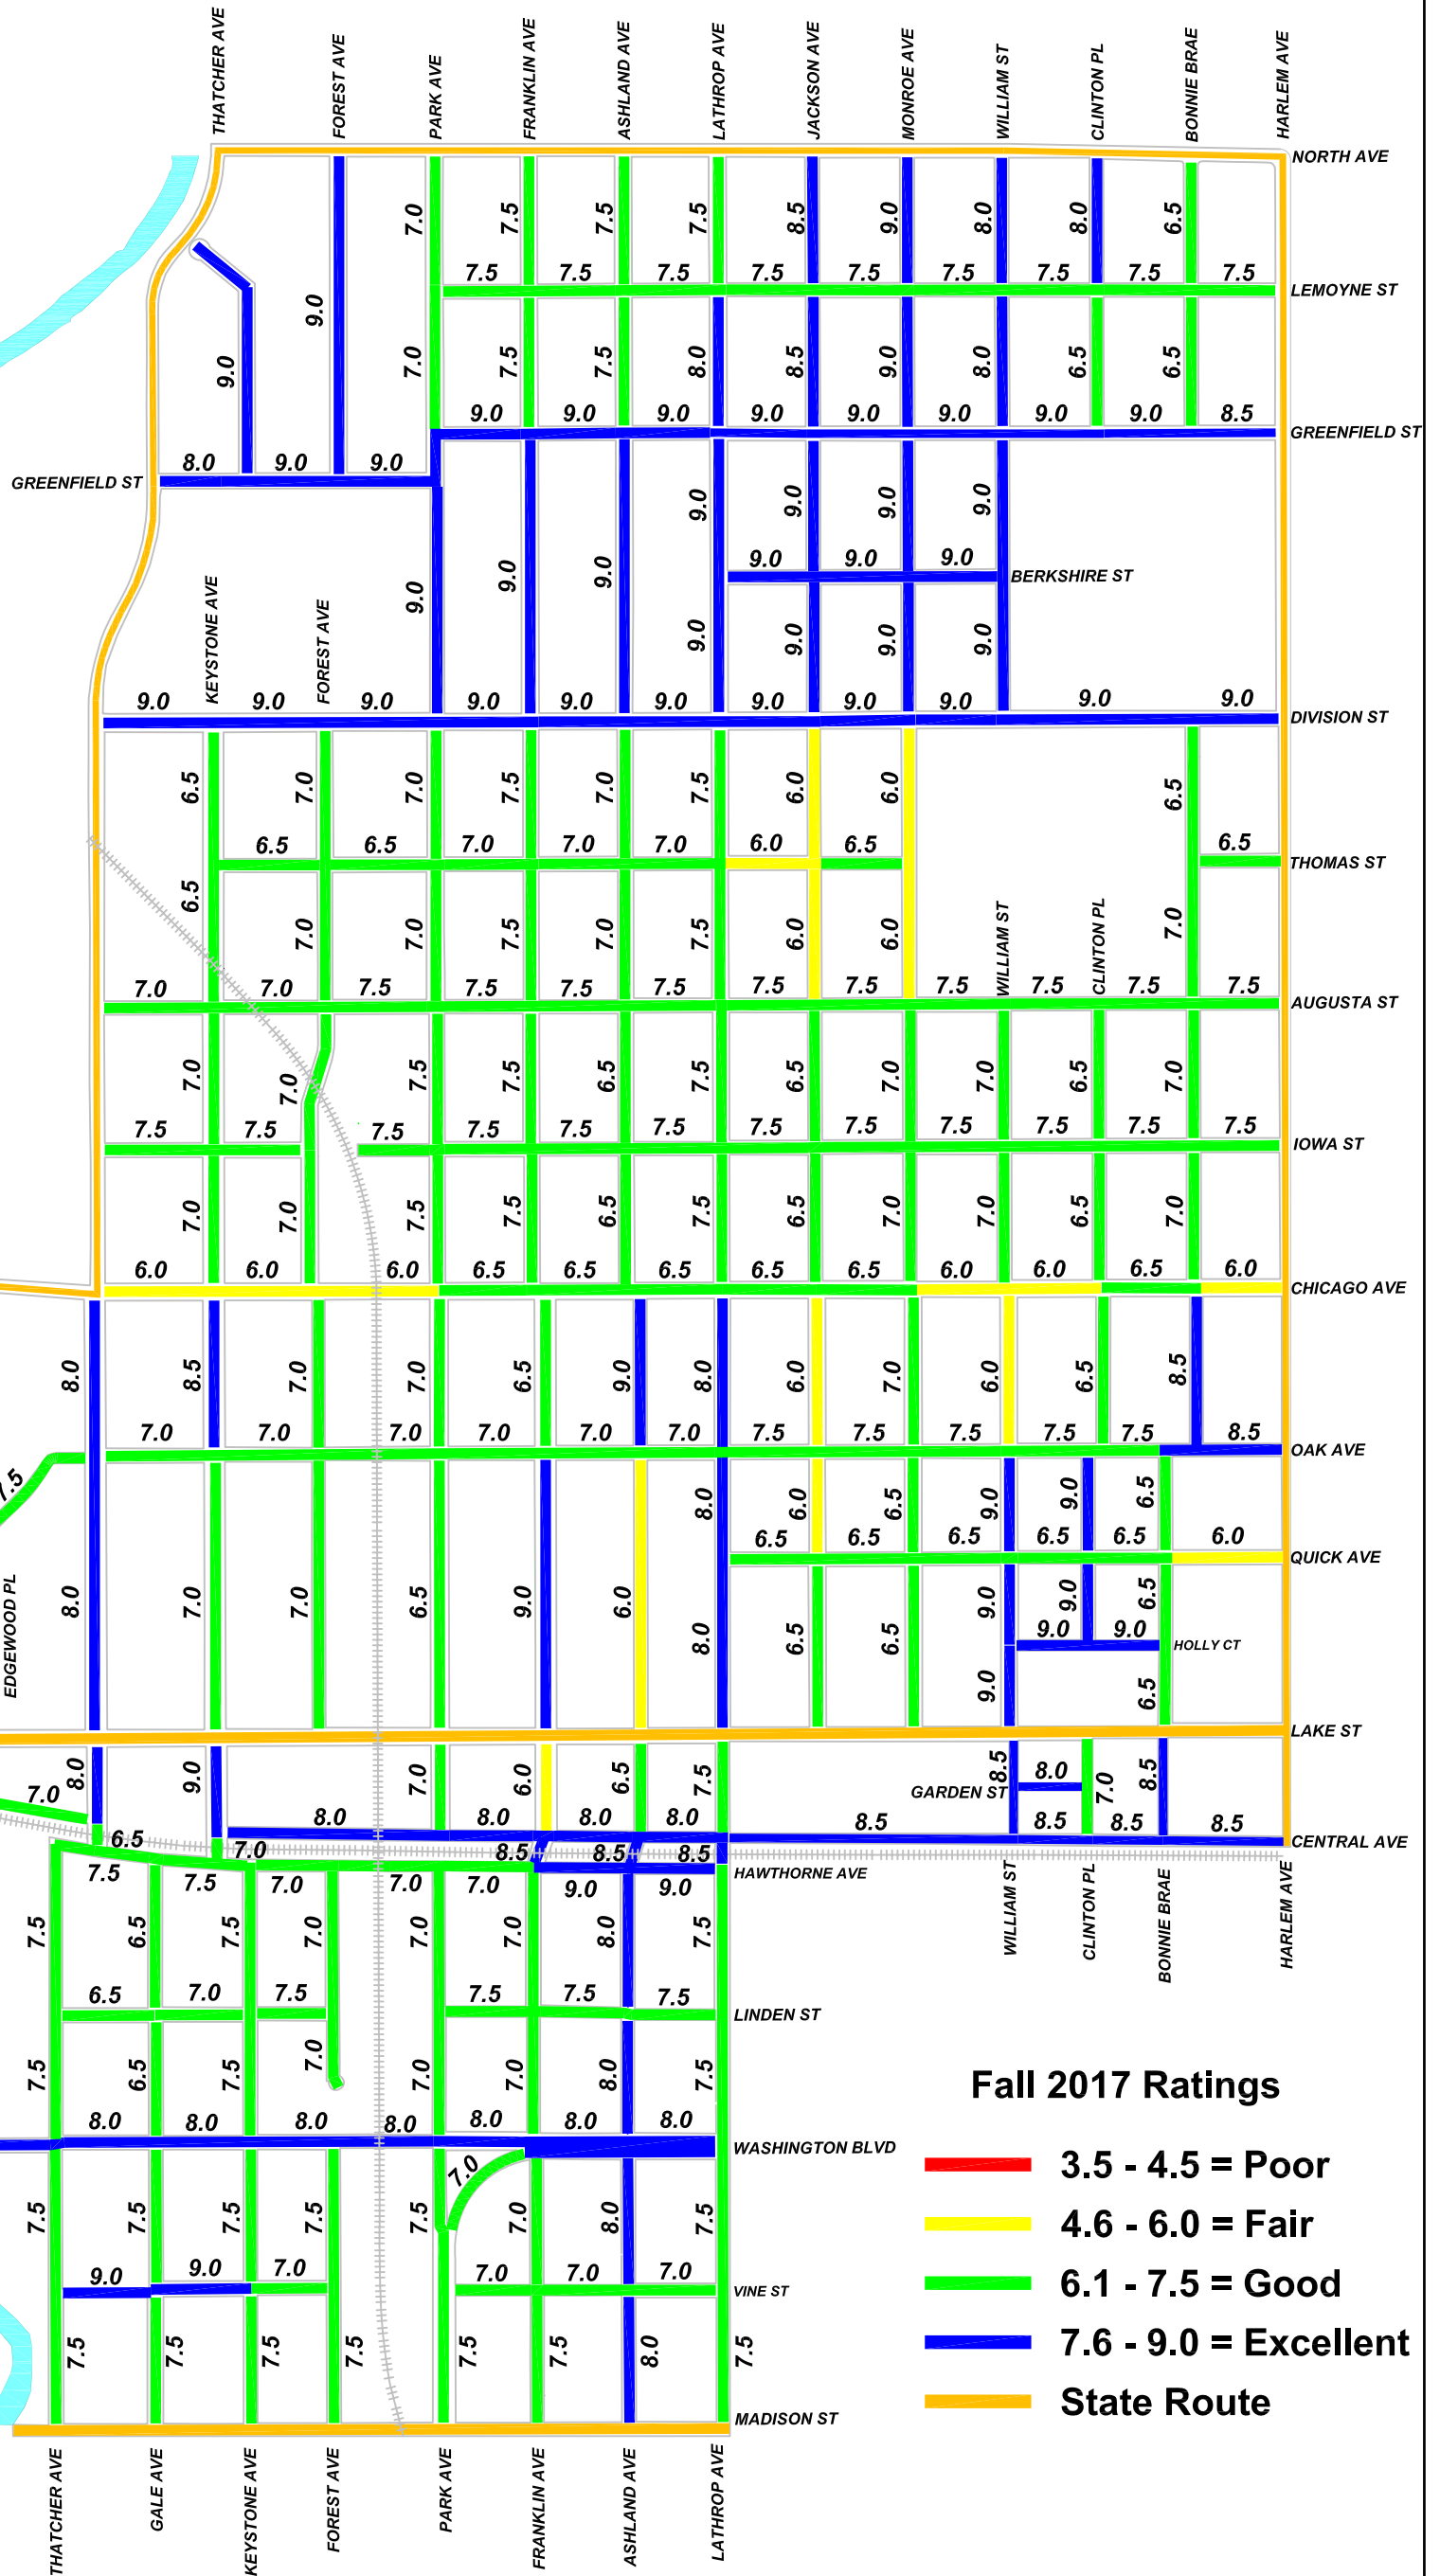

Extensive pavement patching may be somewhat cost effective initially for streets with a “Fair” condition rating, and may slow down the progression of potholes, but the pavement patching needs will be ongoing. This is likely to promote the continued deterioration of the street’s base, which will significantly increase eventual resurfacing costs.

	Crack Sealing	Rejuvenation	Total
FY 2018	\$41,844	\$37,258	\$79,102
FY 2017	\$44,652	\$46,620	\$91,272
FY 2016	\$48,390	\$23,056	\$71,446
FY 2015	\$32,473	\$56,642	\$89,115
FY 2014	\$22,900	\$51,724	\$74,624

Program Description & Justification

In recent years, the practice of microsurfacing has been analyzed to determine its effectiveness. While creating an aesthetically pleasing surface, this type of treatment does nothing to rejuvenate/rehabilitate the existing pavement course. The microsurfacing layer can also create an uneven driving surface at manholes and other locations and can be dislodged due to cracking or during winter plowing activities. For these reasons, Staff conducted research of pavement rejuvenation materials during FY 2016 and FY 2017 and bid multiple pavement rejuvenation products. This type of treatment helps revive the existing pavement to prolong its life as compared to adding a thin layer of material on top of a structurally failing pavement. These projects have gone well and Staff anticipates continuing with this type of application in FY 2019. In FY 2018 the project was jointly bid with the Villages of Elmwood Park and Riverside to optimize unit pricing.

In addition to pavement rejuvenation, Village Staff believes the practice of Crack Sealing to be invaluable. Ideally, this work is completed when the pavement is still in good condition with minimal cracking. Village Staff will continue to bid this work jointly with the Village of Oak Park in an effort to optimize unit pricing.

Village Staff has identified the streets that are ideal candidates for rejuvenation and crack sealing during the annual Street Rating Survey. These streets are typically in good condition, with the idea being to maintain this condition for an extended period of time. Streets of all ratings that have cracks are eligible for crack sealing.

The following figure demonstrates the relationship between pavement condition and typical types of pavement preservation and /or street improvements:

The following figure demonstrates how preventative maintenance can extend pavement performance:

FY 2019 Recommended Projects

With the Village having recently resurfaced a significant amount of streets, Staff recommends maintaining budget amounts at \$50,000 for crack sealing and \$50,000 for pavement rejuvenation. This will enable Staff to maintain these recent pavements in good condition before they start deteriorating.

Pavement Rejuvenation

The following streets have been identified for rejuvenation:

<u>Street</u>	<u>Condition Rating</u>	<u>Proposed Cost</u>
FY 2019 SIP Streets	Excellent	\$16,000
River Oaks (Lake - Auvergne)	Excellent	\$2,000
Auvergne (Lake - River Oaks)	Excellent	\$1,000
Franklin (Greenfield - Division)	Excellent	\$4,000
Lathrop (Greenfield - Division)	Excellent	\$4,000
Monroe (Greenfield - Division)	Excellent	\$4,000
Washington (Thatcher - Lathrop)	Excellent	\$12,000
Ashland (Hawthorne - Madison)	Excellent	\$7,000

Crack Sealing

In addition to the streets to be rejuvenated, additional streets will be identified for crack sealing during late winter/early spring of 2018.

Program Alternative

The alternative is a reactive maintenance program that will accelerate deterioration of Village streets. These maintenance programs, along with pavement patching, will prolong the useful life of Village streets. By not pursuing these maintenance programs, the following infrastructure improvements will be necessary at more frequent intervals:

- Resurfacing: This is a more costly improvement that requires the removal and replacement of the existing worn pavement and minimal base improvement. This type of construction is normally completed over a several week period while rejuvenation can be completed in a few hours.
- Reconstruction: This is a significantly more costly improvement that is necessary in situations of surface pavement failure along with extensive base failure.

Streets, Sidewalks, Alleys - Public Works

Surface Transportation Program (STP)	FY 2019	\$450,000	MFT
	FY 2020	\$0	MFT

- Critical
 Recommended
 Contingent on Funding

Spending History

FY 2018	\$0
FY 2017	\$219,500

Program Description & Justification

The Federal Highway Administration (FHWA) administers the Surface Transportation Program (STP), which is funded through Congress from Federal Gas Tax Revenue. The money is allocated to each state, which is then split between the State and local agencies. The funding for suburban Cook County is divided into smaller groups of communities based on geography. The Village of River Forest is part of the North Central Council of Mayors, which establishes policy and programs for the annual funding allocations.

In order for a street to be eligible for STP funding it must serve as a collector or arterial (those with higher traffic volumes and typically connect to other high-volume roads). Per North Central Council of Mayors policy, this does not include roadways under the jurisdiction of IDOT or Cook County. The streets within River Forest that are eligible for this type of funding are Division Street, Chicago Avenue, Washington Avenue, Thatcher Avenue, and Lathrop Avenue.

The purpose of the Village’s STP is to improve the condition of collector and arterial roads and staff most often utilizes the scope of work involving simple resurfacing along with minor curb and gutter replacement. Staff typically applies for the option that involves 80% federal funding of the construction and construction engineering costs, with the remaining 20% being the responsibility of the Village.

FY 2019 Recommended Project

<u>Street</u>	<u>Pavement Rating</u>
1. Chicago Ave from Thatcher Ave to Harlem Ave	Fair

The preliminary estimate to resurface this street is \$1,525,000 for construction and \$145,000 for Construction Engineering, with the Village’s share being approximately \$450,000 (before reimbursement).

Currently, Chicago Avenue has a street rating of Fair with some sections experiencing a greater rate of deterioration than others. If existing road conditions are not improved, further damage to the street’s base may occur, which will create a structural deficiency.

Program Alternative

Not performing any roadway maintenance, particularly for streets in “Poor” condition, will result in total pavement failure and require reconstruction (of base and surface), which is significantly higher in cost compared to resurfacing.

Traffic Signals

FY 2019

\$146,000

CIF

Critical

Recommended

Contingent on Funding

Spending History

FY 2018 \$4,893.36 (Traffic Evaluation of Signaled Intersections)

Project Description & Justification

A Traffic Signal Evaluation was performed in FY 2018 to determine if the left turn arrow indicators were needed at the traffic signals in the Village where they currently are not in place. Modifications were recommended at the intersections of Thatcher Avenue with Chicago Avenue and Lake Street. The accommodation of left-turn arrows at both intersections was outlined by the Traffic Signal Evaluation completed by Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA, Inc.) in July 2017. Both of these intersections are shared jurisdiction with IDOT, however it is not anticipated that IDOT would contribute to the cost of these signal modifications.

Staff proposes the following projects to upgrade this portion of the traffic signal system within the Village:

FY 2019 Recommended Projects

Intersection Design Study (if required by IDOT): This will consist of using traffic data and base maps and will include intersection capacity calculations, existing and projected peak hour volumes, existing and projected geometrics, typical striping, right-of-way and other significant features.

Traffic Signal Design: Base maps and traffic signal plans will be prepared using the information from the intersection design study.

Lake Street at Thatcher Construction: Traffic signal modifications, add left turn arrows for N/S (includes two new mast arms w/ foundations), remove existing post and foundation in NE and SW corners, pavement marking upgrades, traffic control & protection.

Intersection Design Study	\$	3,500
Traffic Signal Plans	\$	6,500
Lake at Thatcher Construction	\$	66,000
Total	\$	76,000

Chicago at Thatcher Construction: Traffic signal modifications, add pedestrian crossings on north and west legs, add left turn arrows for East and West. Sidewalk/ADA and pavement marking upgrades, new ramps in NW corner, revise crosswalks to high-visibility markings, traffic control & protection.

Intersection Design Study	\$	3,500
Traffic Signal Plans	\$	6,500
Chicago at Thatcher Construction	\$	60,000
Total	\$	70,000

Project Alternative

The alternative to the improvements to these areas of the traffic signal system within the Village is to not act upon the recommendation of the study performed in July 2017. Keeping these intersections in the same traffic signal configuration would maintain higher levels of congestion during peak travel times. These projects can be deferred if deemed too costly to be implemented in the immediate future.

Streets Improvements - Public Works

Parkway Pockets

FY 2019

\$20,000

CIF

Critical

Recommended

Contingent on Funding

Spending History

FY 2018 \$0

Project Description & Justification

The purpose of this project is to determine the feasibility of installing "pockets" throughout the Village that will be capable of storing stormwater before it enters the sewer system in an effort to relieve the over-taxed system during rain events. Staff estimates that it will cost approximately \$15,000 to \$20,000 to install one of these Parkway Pockets.

2019 Recommended Project

Village Staff has identified three locations that appear to be optimal for the installation of a Parkway Pocket. The intent is to install a cost-efficient system that will be capable of capturing stormwater runoff before it enters the sewer system. The system will consist of digging a large pit in the parkway immediately adjacent to an existing street inlet. The pit will be filled with large stone capable of storing stormwater (similar to the stone beneath a permeable paver system). An additional street inlet would be installed next to the existing one, with stormwater runoff entering the new inlet first. The runoff will be conveyed into the stone-filled pit where it will be stored and allowed to slowly infiltrate into the surrounding soil. Only after the pit and new inlet are filled will stormwater runoff be conveyed into the existing inlet and sewer system. The stone pit will be topped with topsoil and sod and will appear similar to the rest of the parkway. Only a small cleanout will remain so that water level observations can be made to determine the efficiency with which the Parkway Pocket re-infiltrates the runoff into the soil.

Project Alternative

The alternative to this project is the status quo, in which all stormwater runoff enters the under-sized and over-taxed combined sewer throughout the Village (with the exception of the area impacted by the Northside Stormwater Management Project). During heavy rain events, these sewers will likely fill up and run out of capacity as they have in the past.

Water and Sewer Improvements – Five Year Capital Improvement Program

This section of the Capital Improvement Plan identifies funding for sewer and water improvements, which are scheduled to continue through FY 2023. The Village’s sewer and water system is comprised of the

Type of Sewer	Number of Miles
Combined Sanitary Sewer	33.13
Storm Sewer	3.37
Water Main	40

Improvements planned for FY 2019 include:

Improvement	Cost	Funding Source	Nature of Project
Sewer Lining	140,000	WS	Critical
Sewer Point Repairs	35,000	WS	Critical
Water Distribution System – Pumping Station	34,000	WS	Critical
Water Meter Replacement Program	16,000	WS	Critical
Water Main Replacement	400,000	WS	Critical
Hydrant Replacement	24,000	WS	Recommended
Total	649,000		

Each project in the CIP is categorized by the requesting department as follows:

Critical- The project must be completed in the year recommended due to safety or operational needs or as mandated by law.

Critical projects are highlighted in yellow.

Recommended- The project will significantly improve operations or safety. The project is strongly recommended for funding in the year recommended or the year after.

Contingent on Funding- The project would be a benefit to the Village and improve service levels but is only recommended if funds are available.

FY 2015	\$	122,251	
FY 2014	\$	57,992	

Program Description & Justification

The purpose of this program is to improve the Village's sewer system and prevent costly repairs associated with failing sewer mains (collapsed, cracked, etc.). The objective is to evaluate the conditions of sewer mains (via televising), identify those in the worst condition, and perform lining of as many sections as possible. In some situations, sewer mains may have failed beyond the ability to line and a point repair (or replacement of a section) may be necessary. The Village's sewer system is a critically

The Water and Sewer Rate Study completed by Baxter & Woodman in FY 2012 recommends an annual funding level of \$140,000 for this program. This increase in budget will allow for both the relining of damaged sewer main as well as the start of a systematic approach to relining all sewers throughout the village, regardless of their condition.

The process of sewer lining consists of inserting a sleeve made of flexible material in the existing pipe. The sleeve is then filled with steam or water heated to a high temperature for curing and hardening. This process provides the existing failing pipes with the structural support needed to continue their service and avoid a costly complete replacement.

In addition to the typical sewer lining completed each year, Village Staff has completed some lining of manholes in FY 2018. Potential candidates were researched throughout the FY 2018 year and lined in the fall. Three manholes were lined at a total cost of approximately \$6,000. This work allows the manholes to be sealed and stabilized without requiring any excavation. The intent of this work is to prevent sinkholes and other pavement failures from occurring due to the decay of the interior walls and base of existing manholes.

Since the Village's first sewer lining project, nearly 40,000 lineal feet of sewers have been lined. This represents approximately 23% of the total sewer mains owned / maintained by the Village (approximately 171,000 lineal feet). All sewers that were rated either poor or fair (condition ratings "D" and "C") during the sewer televising program from the late 1990's have been lined. Lining all un-lined combined sewers that are less than 33 inches in diameter would cost approximately \$9 million.

In 2011, the Public Works Department developed an in-house sewer televising program. Public Works Staff reviews the video recordings and the sections of failing sewer mains are identified and prioritized. This in-house sewer televising program has identified sewer mains in poor condition that will be lined in the coming years. Extreme weather conditions and the on-going root growth of trees have accelerated the rate of deterioration of the Village’s combined sewers.

The following table identifies the sewer condition ratings, description of condition, and the recommended action:

Condition Rating	Condition Description	Recommended Action
A	Random cracking / some roots	Continue monitoring
B	Medium cracking / Medium root problem	Line in one to three years
C	Heavy cracking / Heavy root problem	Line immediately
D	Structural damage / Fully blocked by roots	Requires replacement

FY 2019 Recommended Project

Specific project locations will be determined during the winter months. Public Works Staff will review all sewer televising completed throughout the year by the Operations Department. Each sewer line televised will be rated with the most severely deteriorated sewers being selected for lining. Other sections may also be lined, based on the need for a point repair.

Program Alternative

Once the structural integrity of the pipe is severely affected, beyond the ability to line, the sole option is to perform an open-trench point repair that will require heavy street construction, temporary interruption of traffic flow, and costs associated with restoring the street’s driving surface. The preferred and more cost effective option to improving sewer mains is sewer lining.

Program Description & Justification

The purpose of this program is to improve the Village’s sewer system by replacing failing (collapsed, cracked, etc.) sections of sewer main (also referred to as point repairs). Staff’s objective is to evaluate the conditions of sewer mains (via televising), identify those in the worst condition, and perform relining of as many sections as possible. In some situations, sewer mains may have failed beyond the ability to reline and a point repair may be necessary. Most point repairs are made on an emergency basis and can be costly. The Water and Sewer Rate Study that was completed by Baxter & Woodman in FY 2012 recommends an annual funding level of \$15,000 for this program.

In 2011, Public Works began an ongoing in-house sewer televising program. Village Staff reviews the video recordings to identify sections of failing sewer mains for repair.

Program Alternative

Once the structural integrity of the pipe is severely affected, beyond the ability to reline, the sole option is to perform an open-trench point repair.

FY 2016	\$	15,832
FY 2015	\$	49,100
FY 2014	\$	-

Project Description & Justification

The Village purchases all of its potable water (for both general consumption and fire suppression) from the City of Chicago. The water received from Chicago is treated before arriving to the Village’s water distribution system where it is stored and treated (once again) before entering the water distribution system for consumption. The Pumping Station is where the following components of the Village’s water distribution system are located:

- SCADA (Supervisory Control and Data Acquisition) system: computer system that monitors and controls various components and equipment
- Three Pumps
 - Pump #1: 100 horsepower; 1,540 gallons per minute
 - Pump #2: 150 horsepower; 2,350 gallons per minute
 - Pump #3: 125 horsepower; 1,750 gallons per minute
- 40 valves
- Four meters: two for incoming water from the City of Chicago (located at an off-site location) and two for incoming/outgoing water at the Pumping Station
- Water treatment system (sodium hypochlorite)
- Two underground storage reservoirs
 - 2.0 million gallon storage capacity
 - 0.5 million gallon storage capacity
- Emergency generator: backup power source in the event of a power outage (see CERF).

In FY 2014, the Village contracted the services of Dixon Engineering to perform preliminary maintenance inspections on both underground water storage reservoirs. The purpose was to evaluate the interior and exterior, and to establish maintenance programs and schedules. Dixon Engineering developed a report that included recommendations for re-inspecting each reservoir in five years. The following facility improvements will be necessary within the next two to five years:

<u>Repair/Improvement</u>	<u>Estimated Cost</u>	<u>Year</u>
Replace four water valves in basement of Pumping Station	\$ 22,000	FY 2019
2.0 MG Underground Reservoir: re-inspect exterior/interior	\$ 4,000	FY 2019

0.5 MG Underground Reservoir: re-inspect exterior/interior	\$	3,500	FY 2019
0.5 MG Elevated Storage Tank: re-inspect exterior/interior	\$	4,500	FY 2019
Replace four water valves in basement of Pumping Station	\$	19,000	FY 2020
Replace four water valves in basement of Pumping Station	\$	20,000	FY 2021
Replace pump #1 and associated piping as suggested in Baxter and Woodman efficiency study performed 11/2010	\$	100,000	FY 2022
Install Reservoir turbine generator as suggested in Baxter and Woodman efficiency study performed 11/2010	\$	40,000	FY 2023
Total	\$	232,000	

Valve replacement: During the piping upgrade project (efficiency improvements) that were completed in FY 2014, it was determined that four water control valves in the basement of the Pumping Station were not operating properly. These valves are likely original to the facility. Staff recommended replacing four valves in FY 2015 and initiated a ten-year program to replace all 40 valves in the system (replace four valves annually). Proper function of these valves is critical since the valves give Staff the ability to change or re-route suction and discharge piping in case of emergencies or while maintenance is being performed on Village pumps. The following four valves are recommended for replacement:

	<u>Description</u>	<u>Problem</u>
Valve #1	12" Main shutoff for the outgoing supply line	Difficult to operate and leaks through
Valve #19	8" Discharge valve for pump #2	Difficult to operate
Valve #3	12" Bypass valve on discharge piping	Difficult to operate
Valve #4	12" Bypass valve on discharge piping	Difficult to operate

Project Alternative

There are no alternatives to maintaining the Village’s water distribution system as it is the system that provides potable water to the entire community. Deferring these projects would result in emergency repairs that could increase project costs (compared to soliciting bids/proposals).

FY 2018	\$17,500	continuation of program to replace all meters over 20 years of age
FY 2017	\$16,000	continuation of program to replace all meters over 20 years of age
FY 2016	\$24,000	continuation of program to replace all meters over 20 years of age
FY 2015	\$24,092	continuation of program to replace all meters over 20 years of age
FY 2014	\$24,092	continuation of program to replace all meters over 20 years of age

Program Description & Justification

The purpose of this program is to improve the metering accuracy of Village-owned commercial and residential water meters. Water Division employees tested meters in the 15 to 20 year age category and found that some did not meet AWWA (American Water Works Association) standards for meter accuracy. Although not a standard, studies recommend that residential water meters be replaced every 15 to 20 years. Water meters can be damaged and deteriorate with age, thus producing inaccurate readings. Inaccurate readings will give misleading information regarding water usage, make leak detection difficult, and result in lost revenue for the system.

FY 2019 Recommended Projects

Qty.	Size	Each	Cost
78	0.625	\$ 118	\$ 9,204
13	0.75	\$ 137	\$ 1,781
14	1	\$ 169	\$ 2,366
3	1.5	\$ 479	\$ 1,437
0	2	\$ 673	\$ -
108		Total	\$ 14,788

Program Alternative

As the Village's water metering system is critically important as a source of revenue, it is important to plan/budget for the replacement of water meters that have reached or exceeded the end of their useful service life. The primary alternative to this program is to not budget/plan for water meter replacements and respond to metering failures and inaccuracies as they occur.

An alternative to the Village incurring the costs of the new meters is requiring that the building/property owners incur a portion or all of the new meter costs.

Program Description & Justification

The purpose of this program is to improve the condition of the Village's water mains by replacing aging and deteriorating water system infrastructure. This is accomplished by replacing deteriorating segments of water mains before they break which will necessitate costly repairs and the experience of significant water loss with associated water consumption costs. The Village's water distribution system is a critically important infrastructure system.

The Village has approximately 40 miles of water main. The majority of the water mains are between 50 and 80 years old. On average, there are seven water main breaks per year. It has been proven that as water mains become old and reach the end of their useful lives, performance deteriorates and results in high maintenance costs, loss of hydraulic capacity and water quality, and a significant increase in customer complaints. The AWWA recommends replacing one-percent of the distribution system every

Each year, Village Staff conducts an analysis of failing or problematic sections of water main for the purpose of determining the need to replace specific water mains based on history and number of breaks, outdated size, or any other defective condition. A typical water main project involves an open trench installation of the new water main pipe and the transfer of all fire hydrants and private water services to the new main before the old main is abandoned. Water main projects are typically followed by a resurfacing project of the street's surface.

2019 Recommended Projects

<u>Location</u>	<u>Pipe Length (FT)</u>
Chicago - Thatcher to CN tracks	1,200

The proposed water main replacement project will include the replacement of the existing eight inch water main on Chicago Avenue from Thatcher Avenue to the railroad tracks just east of Forest Avenue through open-cut/trench construction. Multiple valves will be replaced as part of this project. The selection of this project area is due to an increased number of water main breaks in recent years in addition to the paving of Chicago Avenue in FY 2019. Completion of this project will reduce the likelihood that excavations will be needed in the new pavement due to water main break repairs. Lead water services connected to this water main will also be replaced.

The cost estimate for this project is as follows:

- \$345,000 for construction (design and permitting to be performed in-house)
- \$30,000 for construction engineering services

An additional \$25,000 is also being budgeted for miscellaneous lead service replacements throughout the Village based on leak repairs, homeowner partial replacements, etc.

Future Water Main Projects

Staff evaluates the Village’s water distribution system and trends in water main breaks on an annual basis to identify and prioritize future projects. Staff has identified the following water system improvement projects for possible future fiscal years:

- Install an eight inch water main on Augusta Street between Thatcher Avenue and Forest Avenue to increase the flow in this area.

Estimated project cost: \$350,000

Program Alternative

As the Village’s water distribution system is a critically important infrastructure system, it is important to plan/budget for the replacement of water mains that have reached or exceeded the end of their useful service life. The primary alternative to this program is to not budget/plan for water main replacement projects and respond to water main breaks as they occur. These repairs, which are typically conducted on an emergency basis, involve an open-trench that will require heavy street construction, temporary interruption of traffic flow, and costs associated with restoring the street’s driving surface.

FY 2015	\$	7,400
FY 2014	\$	-

Program Description & Justification

The Village's fire hydrant system is a critically important infrastructure system. The Village owns and operates approximately 446 fire hydrants. The purpose of this program is to maintain all of the Village's fire hydrants in excellent operating condition. The Village's Fire Department conducts two hydrant flushing programs each year. During the Village-wide hydrant flushing events, Fire Department personnel identify hydrants in need of repair and provide a list of those hydrants to the Public Works Department to coordinate and/or make the necessary repairs. Hydrants that are not in operating condition are prioritized for immediate repair.

2019 Recommended Project

The Public Works and Fire Departments have identified hydrants as operational, but "too low" (which is defined as less than 18 inches from the ground to port), which prevents the hydrant wrench from rotating freely around the main/steamer port and slows the time required connect the fire hose to the hydrant. Hydrants that have a low flow rate due to a small supply line are also identified. Each year Village staff attempts to replace three of these hydrants to try to eliminate any that do not operate efficiently or provide high flow rates.

Program Alternative

The Village's fire hydrant system is a critically important infrastructure and it is important to budget for the replacement of hydrants that have reached or exceeded the end of their useful service lives. The primary alternative to this program is to not budget/plan for hydrant replacement and make more costly emergency repairs.
